Neurosurgical Pattie Suite

Ray-Cot®	An improved version of the standard rayon neurosurgical pattie with superior strength, absorbency, and performance.
Uniqcot®	The golden mean between Ray-Cot® and Delicot®, for those looking for a thinner pattie for better visibility without compromising absorbency.
Delicot®	Ultra-thin neurosurgical patties designed for skull base keyhole microsurgery, featuring a 0.33 mm profile that offers exceptional pliability and precise molding to wrap delicate structures, protect tissue, and maintain clear visibility under the microscope.
Tapered Delicot™	Tapered Delicot™ ultra-thin neurosurgical patties are designed for skull base and keyhole microsurgery, featuring a tapered 0.33 mm profile that enhances pliability and controlled placement while maintaining visibility in confined surgical spaces..
Telfa®	Perforated natural polymer layers surround a cotton core, allowing fluid to pass through while minimizing surface adhesion and maintaining gentle tissue contact.
Americot®	Highly pliable and soft cotton pattie that is capable of holding greater than 11 times its dry weight in fluid when fully saturated.

Made in the U.S.A
